

PLEASE BE VERY KIND

The digital door viewer enables a comfortable view in front of the door - and can photographically record what is seen.

A door viewer makes it easier for you to decide whether to open your front door or leave it closed. But the small peephole is not easy to use for everyone. The digital alternative can also be operated by senior citizens, children and people who wear glasses. Time and again, tricksters try their luck. The 2.8-inch display of the digital spy is clearly visible. The 0.3-megapixel camera delivers sharp images. In addition, the device can be equipped with a micro SD memory card, which allows you to photograph the area outside your front door - thus also potential criminals. The unit is suitable for door panel thicknesses from 38 to 110 millimetres.

Technologies

- 2.8" large TFT display
- Infrared night vision function, better identification of individuals up to a distance of around 60 cm away from the door
- Ring tone (volume adjustable in 3 steps)
